

# Biophotons

## The light that gives life

### Researchers in the field

- All cells emit light in the form of biophotons.
- Fritz Popp 1970s: Not byproducts but responsible for the operation of biological systems
- Sergey Mayburov 1984: burst of synchronized photons for non-local communication
- Peter Gariaev: 2005 Unknown force holding light together

# The Mind, The Body and the Light

- The mind is the government of 50 trillion cells that create a community that we call the body.
- Each cell carries 0.7 volts of electricity
- $50 \text{ trillion cells} \times 0.7 \text{ volts} = 3.5 \text{ Trillion volts of electricity in your body}$
- This electricity is expressed as an electromagnetic field that can be measured through light.

INTENTION

**I AM physically  
well and mentally  
at peace.**
